

Testbench in Combinational Circuit

To use a testbench in a combinational circuit, you need to follow these steps:

1. We must have a VHDL code that to be tested.

```
library ieee;
use ieee.std_logic_1164.all;

entity UUT is
port (
    input_signal1 : in std_logic;
    input_signal2 : in std_logic;
    output_signal1 : out std_logic;
    output_signal2 : out std_logic
);
end UUT;

architecture rtl of UUT is
begin
    output_signal1 <= input_signal1 and input_signal2;
    output_signal2 <= input_signal1 or input_signal2;
end rtl;
```

2. Create a testbench for the UUT.

```
library ieee;
use ieee.std_logic_1164.all;

entity testbench is
```

```

end testbench;

architecture tb_arch of testbench is
    signal input_signal1 : std_logic;
    signal input_signal2 : std_logic;
    signal output_signal1 : std_logic;
    signal output_signal2 : std_logic;

component UUT
    port (
        input_signal1 : in std_logic;
        input_signal2 : in std_logic;
        output_signal1 : out std_logic;
        output_signal2 : out std_logic
    );
end component;

begin
    UUT_inst : UUT
        port map (
            input_signal1 => input_signal1,
            input_signal2 => input_signal2,
            output_signal1 => output_signal1,
            output_signal2 => output_signal2
        );

-- Apply stimulus to the UUT
    input_signal1 <= '0';
    input_signal2 <= '1';

-- Monitor the output signals of the UUT
process
begin
    wait for 10 ns;
    assert output_signal1 = '0' and output_signal2 = '1'
        report "Test failed"
        severity error;
    wait;
end process;

```

```
end tb_arch;
```

Things to note

- The testbench instantiates the UUT and connects the input and output signals.
- Entity block in testbench is empty because we are not using any ports.
- Entity block from UUT re-typed inside architecture block of testbench, entity keyword changed to component keyword.
- Signal input and output signals are declared in the architecture block of the testbench.
- Value changes are applied to the input signals with desired delays.
